Hydrocarbon Solutions start here....

Do you have any DOT 4BW 260 single port # 1/2 ton cylinders (1,000 lb. water capacity) that are not in service because of their obsolete relief valve?

DOT 4BW 260 Single Port # 1/2 ton

Single Port

GAS INNOVATIONS has the solution:

New Ceodeux CGA approved replacement Multi-Port Valve complete with built in safety relief set to the new Propylene CGA standard of 435 PSI.

Many Industrial Gas Majors and Distributors have large numbers of these cylinders that came equipped with multi-port valves that until now were only available with a 375 PSI safety relief, which is not legal in a 260 PSI rated cylinder. We now have in inventory a large quantity of the new multi-port valve that have safety relief settings at a new CGA requirement which will start to discharge at 435 to a maximum of 520 PSI and is compatible with all LP gases including Propylene. These valves have been approved by CGA and is a terrific benefit to those of you that have an inventory of these cylinders that you have been unable to use.

Gas Innovations can also inspect, refurbish and insert a new multi-port valve for less than 1/2 the price of buying new cylinders.
