

Worthington Cylinders Announces New CylinDirect Express Warehouse

Recently, Worthington Cylinders (Columbus, Ohio) announced the addition of a new, rapid-order fulfillment warehouse at Gas Innovations in Houston as part of its CylinDirect Express program. Worthington Cylinders offers a complete line of high pressure and acetylene resale cylinders in sizes HP-20 cu ft through HP-150 cu ft plus MC through AC 145 cu ft.

CylinDirect Express employs three warehouses strategically located in Tilbury, Ont.; Montclair, Calif.; and now Houston, enabling Worthington Cylinders to ship industrial resale cylinders anywhere in the continental U.S. and Canada within 24 hours.

“Our CylinDirect Express program allows customers to receive quality-made products direct from the manufacturer, with lead times measured in hours rather than weeks,” said Wayne Powers, director of industrial products for Worthington Cylinders.

“The addition of the Gas Innovations warehouse in Texas allows us to reduce already shortened lead times as well as cut down on excess distribution costs.”

Since its founding in 2002, Gas Innovations has grown to become a leading supplier of propylene, propane, and specialty gases, along with a complete line of cutting, heating, and welding consumables.

Additional services include UT (ultrasonic test) cylinder testing, cylinder packs, and related cylinder services and sales
